

## FROM EDITORS

### Dear Authors and Readers of Archives of Psychiatry and Psychotherapy

In this issue we publish, apart from other interesting works, few papers concerning weight problems, body attitudes, and the etiopathogenesis of eating disorders.

These are medical, psychological and sociocultural problems, which we still cannot fully deal with, despite application of various treatment procedures. Some of them have already been described in *Psychiatria Polska* and *Archives of Psychiatry and Psychotherapy* [1-4]. Thorough consideration and confrontation of reflections from various sociocultural backgrounds and clinical settings can be beneficial for better understanding and treatment of those problems.

Sending to all of You Best Season and New Year Greetings, we wish you inspiring lecture of *Archives of Psychiatry and Psychotherapy*.
